

Rodin™ Palette Naturalizing Kit

Introducing the **Rodin™ Palette Naturalizing Kit**, a groundbreaking dental light curing staining system designed to elevate the characterization process for dental professionals. This state-of-the-art kit offers unparalleled control and precision, enabling users to achieve exceptional esthetic results. Available in a diverse range of shades, dental professionals can effortlessly customize restorations, ensuring a perfect blend with patients' dentition and resulting in a seamless, stunning smile.

The **Rodin™ Palette Naturalizing Kit** is engineered to simplify the characterization process, providing enhanced control and accuracy. Its wide variety of colors allows users to improve the esthetics of 3D printed restorations and replicate the appearance of natural teeth. Dental professionals can now tailor restorations to flawlessly complement patients' existing teeth, creating a harmonious and visually appealing result. This innovative kit presents the ideal alternative to traditional porcelain restorations such as zirconia, lithium-disilicate, and feldspathic materials.

Product Features and Benefits:

- Comprehensive color selection empowers users to precisely characterize and color match restorations and provisional appliances.
- User-friendly application encourages increased productivity and efficiency.
- Provides best-in-class wear resistance, ensuring long-lasting performance.
- Demonstrates low water sorption and resistance to discoloration for enduring esthetic results.
- For use with light curing systems in conjunction with a nitrogen atmosphere, maximizing durability and abrasion resistance.
